

Important questions and answers about computers for any one-day competitive exam

Friends, through this post we will get information about important questions about computers, which are very important from the examination point of view and computer knowledge.

These questions are asked again and again in examinations. So if you are preparing for any exam or are interested in gaining information related to computers, then you must read these important questions and answers about computers.

Important questions and answers about computer

1. Where was the first computer installed in India?

Answer: The first computer in India was installed in the Indian Statistical Institute, Calcutta.

2. When is Computer Literacy Day celebrated?

Answer – Computer Literacy Day is celebrated on 2 December.

3. Which country is considered to have the most computers in the world?

Answer – United States of America is considered to be the country with most computers in the world.

4. Who created the world's first supercomputer?

Answer: The world's first supercomputer was built by C-DAC.

5. Who is called the father of computer?

Answer – Charles Babbage is called the father of computers. Charles Babbage invented the computer in 1822. The name of the first computer invented by Charles Babbage is “Differential Engine”.

6. Which is called brain of computer?

Answer- CPU is called the brain of the computer.

7. What is the data going into the computer called?

Answer: The data going into the computer is called input.

8. What is the full name of BIOS?

Answer – The full name of BIOS is Basic Internal Output System. This word is actually the short form of Basic Input / Output System. This is build-in software that determines what the computer can do without accessing the programs from disk. The main function of BIOS is to boot the operating system on the PC.

9. Who is the inventor of WWW?

Answer- The inventors of WWW are Tim Berners Lee and Robert Cailliau. Both of them together invented WWW (World Wide Web) in 1989.

10. Which are the two popular output devices?

Answer- Two popular output devices are monitor and printer. Apart from this, other output devices also include Plotter, Projector, Speaker etc.

11. Which device is used to view all types of information or output of the computer?

Answer- Monitor is used to view all the information and output of the computer.

12. The medium of output is?

Answer: The medium of output is printer.

13. What is the full form of CD ROM?

Answer- The full form of CD ROM is Compact Disk Read Only Memory. Compact Disk Read Only Memory: This is an example of secondary memory.

14. What is the meaning of RAM in computer?

Answer – In computer, RAM means Random Access Memory. It is a type of computer memory that is accessed randomly. This means that it temporarily stores the work being done in the computer.

15. What is the computer hardware that can store large amounts of data called?

Answer: The computer hardware that can store large amounts of data is called a magnetic tape hard disk.

17. Which is not counted as a type of memory in a computer?

Answer – Server is not counted as a type of memory in a computer.

18. What is a pen drive?

Answer – Pen drive is an electronic memory. A pen drive is a portable Universal Serial Bus (USB) flash memory device for storing and transferring audio, video, and data files to and from a computer.

19. Why is cache memory used?

Answer – Cache memory is used in computers to increase the speed between memory and processor.

20. What is built-in memory of computer?

Answer: The built in memory of computer is ROM.

21. When a file is saved and the computer is turned off, at which place does the data remain?

Answer: After saving a file and turning off the computer, the data remains save in the secondary storage.

22. What is the full name or full form of www?

Answer- Full name of WWW is Word Wide Web.

23. How is word length measured in computers?

Answer – In computers, the length of a word is measured by bytes.
